

Not a bad start. You're making an argument, but you need more data to support your claims. Use cost comparisons in \$/kWh to answer any skepticism.

Concerns

- A few minor spelling/capitalization/punctuation errors
- Some sentences could be revised to be in the active voice
- Provides background for nuclear and AFR, but it doesn't do much to support the argument
 - Compare the costs of nuclear power with other energy sources in \$/kWh
 - Use more data to support your claims
